Thursday, 11/3 @ 4pm

Kline Geology Laboratory, Room 123

Victoria Meadows is an Associate Professor of Astronomy and the Astrobiology Program Director at the University of Washington, as well as PI for the NASA Astrobiology Institute’s Virtual Planetary Laboratory. Her research focuses on acquisition and analysis of remote-sensing observations of planetary atmospheres and surfaces. In addition to studying planets within our own solar system, she studies exoplanets, planetary habitability and biosignatures.
